ALL-IN-ONE

THE FACTS!

- We are always touching our phones, transferring bacteria to our devices.
- The average cell phone harbors more than 25,107 bacteria per square inch.
- A cell phone can be the most infected surfaces you come in contact with.
- Rarely do people clean or disinfect their phone, so germs and bacteria build up.
- What types of germs? E-coli, influenza and MRSA germs that can cause infections.
- Screen Cleaner has been developed to easily solve this growing problem!
